How it works

This sensor is a motion switch, which turns on the light on detection of people movement, and turns off after a pre-selected holdtime when there is no people around. A daylight sensor is also built in to prevent the light switching on when there is sufficient natural light.

With sufficient natural light, the light does not switch on when presence detected.

With insufficient natural light, the sensor switches on the light automatically when person enters the room.

The sensor switches off the light automatically after the hold time when there is no motion detected.
