Frame THPG Glass transparent

Product code 22638

Brand THPG
Diameter 82.0mm
Casing colour transparent
Casing material glass
Work environment indoor use

System covering made of 4 mm thick, thermally hardened white glass from the Upper Palatinate Forest (Germany) with outstanding transparency. This covering can be combined with all parts of the Bakelit and Duroplast switch systems that have a central insert (switches, push-buttons, sockets, junction boxes) and is intended as the external piece of a multi-part installation. System coverings can be installed flush next to and below each other. Single coverings are also available. Installation note: The wallpaper must not be thicker than 0.5 mm in order to comply with all VDE regulations and standards. Therefore, the hollow wall boxes must be installed neatly so that the plastic disc with a thickness of 1 mm is flush with the wall. The construction of our switches with white glass coverings requires a different installation process than usual: the electrician installs the inner workings and the plexiglass ring. Then wallpaper is hung over the fully connected switch, and finally the coverings are attached. If you want to mount several individual coverings next to each other, you have to take this into account when placing the boxes; in this case, 20 mm spacers are necessary. When installing system coverings, the centres must be exactly 71 mm apart. We generally recommend the Kaiser range of hollow wall boxes, which also includes the appropriate spacers.

We advertise with classic materials in solid quality. This is not just an empty phrase. Other manufacturers install an impact-resistant plastic plate behind their porcelain coverings in order to pass the test institutes' hammer impact test. We solve the problem differently - by using more material. Our porcelain coverings are 13 mm thick and consist entirely of the ceramic material, which you can actually see thanks to the transparent glaze. The fact that our uncompromising approach works is confirmed not least by the VDE certification of our products. We distinguish between two types of coverings: those for our switches, push-buttons, dimmers and outlets on the one hand and those for our junction boxes and special applications on the other. Both types are available as single or system coverings; the multiple coverings can only be combined with switches, outlets, etc. The reason for the difference is the different diameter of the inner opening for the central insert.
