1-10V output control to achieve tri-level dimming (corridor function), with manual override access

Tri-level Control (Corridor Function)

Hytronik builds this function inside the motion sensor to achieve tri-level control. For some areas which require a light change notice before switch-off. The sensor offers 3 levels of light: 100%-selected light-off and 2 periods of selectable waiting time: motion hold-time and stand-by period. Selectable daylight threshold and freedom of detection area.

With sufficient natural light, the light does not switch on when presence is detected.
 With sufficient natural light, the sensor switches on the light automatically when presence is detected.
 After hold-time, the light dims to standby level or switch-off if the stand-by period is pre-set to On.
 Light switches off automatically after the stand-by period elapses.
